

Used Forklift Parts

Used Parts for Forklift - Inevitably, lift truck parts will eventually wear out and need replacing. The option of buying new components can become expensive so another idea is to buy used parts. This could save much cash in the long run. It is a great idea to buy used forklift components that have been remanufactured. These parts will ensure that you are getting parts which would work for a long time and be productive.

Remanufacturing worn out or broken components is a less expensive method overall as opposed to rebuilding. With rebuilding parts, only the components that are broken or worn out get replaced, which means that other wearable parts may break down soon after purchase.

Remanufacturing however offers the best assurance for used components. Remanufactured parts are taken apart and cleaned and then all wearable pieces are replaced. All wearable components are replaced regardless of age or wear which is one more reason why reproduced components generally function so much better. Whatever part within the part is new and this provides far longer life to the used part. Depending on the forklift parts which are being redone, the cleaning process and the entire remanufacturing process will differ.

After complete disassembly, the engines are oven cleaned. Several parts of the engine like pistons, spark plugs, rings, filters, valves, and valve springs can be replaced during the remanufacture process. The engines are hot tested after reassembly to guarantee that there are no oil pressure problems, no leaks, noises or any vacuum.

Transmissions are another item which is oven cleaned after being disassembled. The transmission is then washed. A comprehensive inspection is performed so as to check for any cracks. Seals, bearings and bushings are all replaced. Usually, the replacement components used on transmission parts meet OEM specifications.

A few lift truck parts like for instance the water pump, torque converters, the alternator, the starter and steer axles can be quite serviceable after worn components are replaced. The electronic control in the electric lift truck is maintained by the control card. This card could also be remanufactured with replacing all aged and worn out components. Not like several forklift parts the control card could only have the worn and aged components replaced.

Parts that are reproduced have to be meticulously examined upon reassembly to ensure they are in good condition previous to being sold. When obtaining these parts, it is a good idea to be sure that they have undergone all of the proper testing and inspections. On certain larger parts like for instance steer axles, engines and transmissions, OEM specification replacement parts should be utilized.

The dealer of used forklifts and components can guarantee that the remanufactured components have met OEM specifications and that these components meet industry standards. Many details go into remanufacturing second-hand parts. This attention to detail provides more serviceability out of remanufactured components opposed to the parts that were just rebuilt.
